

Sixteenth Annual Report
OF THE
SHARON SANATORIUM
SHARON, MASS.

THE SHARON SANATORIUM FROM THE SOUTH-EAST.

Sixteenth Annual Report

OF THE

SHARON SANATORIUM

FOR

PULMONARY DISEASES

SHARON, MASS.

March, 1907.

INCORPORATED MARCH, 1891.

MALDEN:

GEO. E. DUNBAR, PRINTER, 382 MAIN ST.,

1907.

OBJECT OF THE SHARON SANATORIUM.

TO supply a suitable institution for the treatment of *incipient* pulmonary diseases only, arising in women who are unable, for pecuniary and other reasons, to seek distant health resorts. Only patients who are of limited means are received, and no far advanced cases are admitted.

Price of board, \$5.00 per week, exclusive of laundry. The services of the Medical Director and medicines are given free of charge.

Visiting hours { from April 1 to November 1, 3 to 5 P.M.;
 { from November 1 to April 1, 1 to 3 P. M.

Visitors are kindly requested to adhere to these hours.

Applications must be made to the Superintendent, Miss Alice R. Hodges, Sharon, Mass.

THE SHARON SANATORIUM FROM THE SOUTH-WEST.

DIRECTORS' REPORT.

The first of March, 1907, marked the close of the sixteenth year of the Sanatorium's existence.

From the number of applications made during the year it can be easily estimated that the Sanatorium could have been filled to fully five times its present capacity, although the same principle is still applied of admitting no patients for whom there is little or no hope of arrest of the disease.

The result of the year's work, as will be seen by the Medical Report, is better than ever before, which is a cause for congratulation. In response to letters sent to former patients by our superintendent, Miss Hodges, the so-called "Loving Fund," the income from which is intended to assist worthy women who are unable to pay the price of board, has received a most gratifying addition, the fund amounting now to something over \$1,200. The letters accompanying the contributions express so warmly the feeling for the Sanatorium that a few extracts are given:—

"I sincerely hope that your efforts may meet with a generous response. My health has been very good. The stay at the Sanatorium did me a world of good and I shall always remember it with gratitude."

"I can never sound too much the praises of the Sharon Sanatorium. It did me so much good. I am still teaching, and am well."

"I often think of my bed on the verandah these snowy days. I am very well, and I shall always be pleased to do what I can to help you."

“ I am always interested in anything that concerns the Sanatorium, as I know and can appreciate what benefit I received there, and am very glad to be able to do what little I can for those to whom I owe so much and whose kindnesses to me will never be forgotten.”

“ I shall never forget how much was done for me at the Sanatorium and how kind you all were to me. There is hardly a day passes that I do not think of the ‘ San ’ and the many pleasant hours I spent there. I feel splendid, and everyone remarks on how well I look.”

The Sanatorium has never been in debt ; but the great increase in the cost of living has made the outlay necessarily much greater than in former years, in spite of earnest endeavors to economize in every possible direction without detriment to the work. The death of many of the best friends of the Sanatorium has withdrawn a large means of support. It is therefore of vital importance that generous aid should be given to keep the institution still free of debt. The fact that, after sixteen years of work, it has been referred to by many medical men from different parts of the Union as a model of its kind should be sufficient to bring increased funds for its support and for enlarging its capacity. If substantial subscriptions are not sent soon, the work of the Sanatorium may become seriously embarrassed.

During the year several marked and necessary improvements have been made. A new balcony has been erected on the southern side of the main building and the windows of several of the contiguous bedrooms have been cut down to enable the patients to be wheeled out of doors and to sleep in the open air,— a plan which has added greatly to the pleasure and welfare of all. Similar methods have been employed in two of the rooms in

the wing, and the same plan should be adopted in the remaining bedrooms. It is astonishing to see how the patients enjoy sleeping in the open air, even in the coldest weather.

It is also of great importance that the original building, which was not wired for electricity, should have electric lights, which are much more safe, convenient, and hygienic, than lights from gasolene or kerosene. Money will also be needed for numerous necessary repairs throughout the buildings.

The new system of drainage by filter beds was successfully completed last summer, under the supervision of Mr. Ernest W. Bowditch and Prof. William T. Sedgwick. The system is now a model of its kind, and insures perfect safety against pollution of any water supply in the neighborhood. The necessary expense entailed by this work made a very large inroad upon our treasury.

It is a matter of general interest to know that the picture entitled "A Sun Bath in Winter" published in our annual reports has been copied far and wide throughout the United States, several State Boards of Health having requested that a copy should be placed in their own reports to induce the various legislatures to establish similar institutions for tubercular patients in other states.

The Endowment Fund begun last year has had one or two substantial additions, and amounts now to about \$20,000. At least \$200,000 is needed for this purpose.

Attention is especially called to the report of our Superintendent and Matron, Miss Hodges.

Again we ask for aid in the following directions : —

1st. Subscriptions of any amount, no matter how small, to assist in defraying the annual expenses and to keep the Sanatorium out of debt.

2nd. A larger list of Annual Subscribers.

3rd. Large subscriptions to the Endowment Fund.

4th. Further subscriptions to the "Lovering Fund," to bring it up to \$8,000, the income from which shall be used to assist worthy women to pay the price of board.

5th. A fund for the establishment of a scientific laboratory which would greatly enhance the value of the work done at the Sanatorium in the crusade against tuberculosis.

We desire again to express our thanks to the many friends who have assisted us, especially to the newspaper press of Boston and Sharon.

THE DIRECTORS.

THE SUN-BATH (WINTER).

Special Appeal

FOR THE

Sharon Sanatorium.

Tuberculosis causes more deaths than any other known disease. The Sanatorium is not only a place where hundreds of women have been treated successfully and enabled to become active workers again but is a school to teach others how to prevent disease.

Its educational effect upon the community for all classes cannot be overestimated.

The increased cost of living and the death of many of those who have helped the Sanatorium makes it necessary to send out urgent appeals to assist in meeting the annual expenses.

The Directors ask for contributions, large and small, whether in the form of "donations," "annual subscriptions," or "bequests," and hope for the cooperation of all who know the sorrowing and suffering that is brought into homes from tuberculosis.

SUPERINTENDENT'S REPORT.

MARCH 1, 1907.

TO THE DIRECTORS OF THE SHARON SANATORIUM.

Ladies and Gentlemen:—

The past year has been a trying one in regard to expenses ; on comparing notes with former years I find the increased expense is largely owing to advanced prices.

The receipts from patients have been somewhat larger as we have finished off another room, making the number now twenty-two.

We increased our garden somewhat but the weather was unfavorable for potatoes and some other things. Tomatoes did finely. We were able to sell about sixteen dollars worth of vegetables. We had all the fresh vegetables we could use and canned enough for the winter's use.

We are anticipating economy and less friction in regard to ice this summer as we have stored about one hundred and twenty tons in our new ice house at much lower cost than last year.

The "Lovering Fund" which was spoken of in my last report is an example of what small but united giving can do. A little sale at the Sanatorium and many letters written have brought cheerful responses ; bringing up the sum to \$1,240—an increase of \$1,010 since last spring. \$275 of this amount was given by former patients with many expressions of goodwill and gratitude to the Sanatorium.

The patients received much pleasure during the win-

ter through the kindness of Mrs. E. F. Bowditch, who gave them a musical treat with the help of Miss Rosalind Rissi.

Some books have been added to the library — Mr. Perkins of Milton having been very generous in that direction.

Special mention should be made of the constant generosity and kindness of Messrs. F. W. Bird & Son, who have helped the Sanatorium in many ways.

I am grateful to all who have given aid so generously and also to all my efficient helpers in the Sanatorium.

ALICE R. HODGES.

Superintendent and Matron.

SANITARIUM

MEDICAL REPORT.

Full capacity of the Sanatorium	22
Number of patients entered since March 1, 1906 . .	48
Number of patients discharged during the year . .	45

Of those discharged, two classed as suspected phthisis, lacked sufficient clinical evidence to make a definite diagnosis, even though they showed suspicious symptoms of beginning pulmonary trouble. A case of tuberculosis of the glands and one of tuberculosis of the wrist were discharged apparently cured. These four cases, together with one who stayed less than a month, are, therefore, not considered in detail in this report.

The following table shows the condition of the remaining 40 patients at entrance and the result of treatment. The cases are classified in accordance with the methods used heretofore in the reports for the sake of comparison. The classification made according to recommendations of the National Association will be found at the end of the Medical Report.

	Incipient	Advanced	Totals	Percentage
Arrested	25		25	62.5
Improved	3	10	13	32.5
Not improved . .		1	1	2.5
Died		1	1	2.5
Totals	28	12	40	

The case that died contracted pneumonia soon after entrance.

The percentage of arrested and improved cases naturally varies from year to year somewhat, according to the condition of the patients upon entrance.

In making these statements, practically the same terms are used as heretofore. By "incipient" is meant cases in which the physical signs, such as changes in percussion or respiration, possibly a few rales, are confined to small areas, usually in one or both apices of the lungs, and in which only slight constitutional signs, such as fever, indigestion, or loss of strength, are present.

The term "advanced" is applied to all cases in which the symptoms and signs in the chest are beyond the incipient stages. Far-advanced cases, in which the pulmonary and general symptoms point to a practically hopeless condition, are not received.

The term "arrested" is applied to all cases, with very rare exceptions, in which cough and fever have disappeared, when the sputa, if present, show an absence of bacilli, the general symptoms and appearance being those of health, when they leave the Sanatorium.

The term "cured" is not used until at least two years after the disappearance of all active symptoms, and when the patient has returned to ordinary conditions of life. Many of those discharged as "arrested," however, would from their general condition, be with justice classed under the more favorable term.

Among the "arrested" cases (26).

The number who had bacilli in their sputa was	8
The number who had a positive tuberculin reaction was . .	18

Average stay of all cases	5.5 months
Longest stay of "arrested" cases.	13.5 months
Shortest stay of "arrested" cases	1. month
Average stay of "arrested" cases	5.5 months
Average gain in weight of all cases	12.2 pounds
Average gain in weight of "arrested" cases	13.2 pounds
Average gain in weight of "improved" cases	10.4 pounds
Average age of "arrested" cases	27. years
Average age of all cases	29. years

In stating the shortest stay of an "arrested" case as one month, it should be remembered that no claim is made other than that all active symptoms had ceased almost immediately after entrance.

Of the twenty-two cases still in the Sanatorium, the disease is in a state of arrest in eight, and eleven are improved; three have been in the institution too short a time to warrant any conclusions being drawn regarding their condition. Tubercle bacilli have been found in sixteen. Four have had a positive tuberculin reaction, while in two the physical examination alone and the history warrants making a diagnosis of tuberculosis, although they will both receive the tuberculin test as soon as possible in order to corroborate the diagnosis.

Favorable reports are still received from the majority of the patients who were formerly in the Sanatorium and discharged as "arrested cases." Some of these patients left Sharon nearly fifteen years ago, and have been well ever since, leading active lives.

We are indebted to Dr. Walter C. Bailey for occasional assistance during the year and to the Saranac laboratory for generously supplying us with tuberculin.

We add our earnest appeal to that of the Directors for financial aid in supporting and increasing the work of the Sanatorium.

No record has been made of the direction or velocity of the wind, but in general all west winds are fair and east winds bring foul weather. Sudden changes are frequent, but the harshness of the east wind is not felt so keenly as in Boston because of the intervention of the Blue Hill of Milton. The Sanatorium is so well protected by woods that there is seldom any hardship to patients from winter winds.
